

NATHAN GIN

+1 (650) 759-3494 | nathanbsgin@gmail.com | San Mateo & Irvine, CA | nathangin.github.io

EDUCATION

University of California, Irvine

Master of Science (M.S.) in Statistics | GPA 3.7

Expected 2026

Bachelor of Science (B.S.) in Data Science | GPA 3.6

Dec 2023

WORK EXPERIENCE

Intuit

Fraud and Risk Analyst Intern

Jun 2026 – Sep 2026

- **Policy Automation:** Automate fraud and risk policy workflows by building internal Claude Skills, streamlining policy application, and reducing manual review turnaround.
- **Fraud Detection:** Improve fraud detection models for Credit Karma Money by enhancing data labeling processes, evaluating transactions both in real time and post-transaction.

Tarsus Pharmaceuticals

Data Engineer and AI Consultant

Jan 2026 – Jun 2026

- Ingested and transformed enterprise data into Databricks via Delta Live Tables and Unity Catalog; built production SQL pipelines for commercial and marketing analytics.
- Architected agentic AI workflows connecting Databricks Genie MCP servers and vector search indexes to Microsoft Copilot Studio, deploying custom chatbot fleets in Teams for cross-functional self-service.
- Advised on experimental design and statistical analysis of commercial/marketing data, guiding data-driven decisions on campaign performance and market segmentation.

IT (Data Analyst and AI Engineer) Intern

Jun 2025 – Sep 2025

- Designed an enterprise Retrieval-Augmented Generation (RAG) chatbot integrating ServiceNow, Databricks, vector search, and LLMs, improving response time from days to seconds; authored end-to-end architecture documentation.
- Built secure OAuth 2.0 ingestion pipelines with full/incremental sync to Delta tables; implemented metadata logging.
- Implemented embedding pipelines with incremental updates, ID generation, session memory, and similarity scoring.
- Configured Azure API Management for routing, authentication, CORS, and request transforms; supported a single-page HTML/CSS/JS UI with Okta Authentication.

Outlier AI / Handshake AI

Data Science AI Trainer

Jan 2024 – Mar 2025 / Oct 2025 – Jan 2026

- **Model Optimization:** Optimized and evaluated prompt responses for quality and consistency in large language models.
- **Peer Review:** Reviewed output for technical correctness and contributed to improving model truthfulness.

Capstone Project (Irvine, CA)

Collaborative Research with UCI Stem Cell Research Center

Jan 2023 – Jun 2023

- Evaluated the effectiveness of stem cell treatments for spinal cord injury using statistical models and hypothesis testing on murine data; automated movement tracking in ladder beam task videos with DeepLabCut, training a deep neural network to a 0.096% error rate.

Cepheid (Sunnyvale, CA)

Global Access Digital Research & Analysis Intern – Web Strategy

Jun 2022 – Sep 2022

- **Dashboard Development:** Developed interactive dashboards using Google Data Studio to visualize quality control metrics, enabling leadership to identify trends and improve decision-making processes.
- **Search Optimization:** Utilized Google Data Studio, Google Analytics, and Conductor to enhance search performance, resulting in a 7% increase in impressions and a 15% improvement in position for website visibility.

Teaching Assistant, UC Irvine

Lab Assistant/Teaching Assistant

Sep 2023 – Dec 2023; Mar 2025 – Jun 2025

- Ran weekly review sessions and assisted students in labs and lectures for Probability & Statistics and Intro to Programming in Python.

PROJECTS

- **Biostatistics Application (R):** Modeled longitudinal beta-carotene serum data from a Phase II clinical trial (n=46) using linear mixed effects models with random intercepts/slopes, identifying a statistically significant dose-dependent pharmacokinetic trend and informing optimal dosing intervals.
- **Automated Weather Trading System (Python, GitHub):** Built a live trading system that aggregates real-time data across multiple weather stations to forecast temperature outcomes, compares forecasts against Kalshi weather-contract pricing to detect statistical edge, and automatically executes buy/sell trades when a threshold edge is met.

SKILLS

Languages & Tools: Python, R, C++, JavaScript/HTML/CSS, SQL, PostgreSQL, Databricks, Delta Live Tables, Unity Catalog, Azure, OAuth 2.0, Tableau, Google Data Studio, Excel, Salesforce, scikit-learn, PyTorch, TensorFlow, Kalshi API, Web Scraping, REST APIs

Concepts: LLMs/RAG, Agentic AI Workflows, Vector Search/Embeddings, Bayesian Analysis, Clinical Trials, Spatial Statistics, Biostatistics, Algorithmic Trading, Price Optimization
